Eurofins Medinet completes Global Integration of Laboratories using ClinAxys® II

Eurofins Medinet, one of Europe's most highly respected providers of laboratory services, has completed the global integration of four clinical trial central laboratories. Each location, in Breda (Netherlands), Shanghai, Singapore and Washington DC, is now linked to a central ClinAxys® II LIMS database.

Clinical trials study management is handled centrally at the main facility in Breda, enabling client-specific electronic data and reports to be forwarded promptly and accurately to their study sponsors.

Instrumentation at each site is run via special interfaces enabling high-speed, bi-directional, data transfer between the instruments and the database. This ensures that only the relevant, study-specific, analytical tests are performed on a sample when it is placed on any instrument, irrespective of its location. All data is reviewed and authorised before production of client-specific reports. Any alert values or data inconsistencies are automatically detected and reported immediately.

Bart Kerkhofs, IT Manager at Eurofins Medinet Breda, is appreciative of the long-term relationship with Clinical Systems and said:

"Eurofins Medinet have used ClinAxys® since 1996. We have worked closely with Clinical Systems throughout this time, developing new facilities and upgrading our installation as new products become available. We are active in the ClinAxys® User Forum and value the experience and knowledge available in Clinical Systems"

Note to Editors:

About Eurofins Medinet

Building on 20 years of experience, Eurofins Medinet offers the synergy of integrating a full spectrum of central laboratory services to support pharmaceutical drug development. We are proud of our unsurpassed quality standards in laboratory testing, data management, logistics services, and project management. Eurofins Medinet offers a full range of safety parameters, biomarkers, genomic testing, microbiology testing and highly specialised bioanalytical services.
